

Sprint 4 Report Share Yourself Artists Web Team 02/24/19

Actions to Stop Doing

We need to stop not setting aside more time to explain what is happening on the AWS side and the changes that are made so we all have a better understanding of the functionality that was implemented. We are not keeping an accurate scrum board with up to date user story classification. Try to be on time for our SCRUM meetings and TA meetings; however, for the most part everybody does eventually show up, but it has a been consistent minor problem. During the meetings, we need a more structured meeting, to prevent from working on to many different things at one time. Establish a better form of communication with the project owners, it seems that some features we implement are changed last minute which often increases the backlog.

Actions to Start Doing

Start keeping a more regular updated SCRUM board and weekly burn-up chart. We will need to plan out new features like the recommendation system, specifically the UI and how categories will be calculated. We are also not testing our functions towards the end of our sprint which we really need in order to make the code production level ready. We have to make a regular habit of keeping the repo update with the changes we make to our project. We probably should make an effort to make some comments to code so when others use it they are not completely lost on the functionality of it.

Actions to Keep Doing

We have been communicating extremely well. First, we established slack as our main method of communication where all members and Scott participate in and the chat is active daily. If we keep this up, our communication will be right where we want it. Also, we are doing very well with coordinating extra meeting times as everyone seems to be able to work with the proposed times, thus we should continue these group meeting times where we can code together and discuss further plans. We continually have been

linking each other helpful resources, in order for us to learn the necessary skills cohesively. We also will continue to pair program whenever needed to finish user tasks more efficiently when previous user stories have been completed.

Work completed/not completed

Completed:

- Users can now see accurate dynamic user information where the current information is now being pulled
- The chat is now organized in chronological order
- Users can now filter their art by category on the user dashboard
- Users will now be asked for delete confirmation before their art is deleted
- The right side of the navigation bar can now take the user to the specific art and artist page that is shown on the bar

Not Complete:

- Finished all user stories.

Work completion rate

The total number of user stories completed during the prior sprint was 6. As a team, we spent 57 ideal hours working on our tasks. In total, we spent our time working on our tasks across 6 days. We completed 1 user story a day and worked on average 8.16 hours a day. Our cumulative progress has been 201 hours over the course of 26 days, which comes out to 7.73 hours per day.
