

Sprint 6 End Report Share Yourself Artists Web Team 03/11/19

Actions to Stop Doing

We still need to keep our Scrum board up to date as we are doing user stories. Try to be on time for our SCRUM meetings and TA meetings; however, for the most part everybody does eventually show up, but it has been a consistent minor problem. During the meetings, we need a more structured meeting, to prevent from working on too many different things at one time. Establish a better form of communication with the project owners, it seems that some features we implement are changed last minute which often increases the backlog, or some features are added mid-week.

Actions to Start Doing

Start keeping a more regular updated SCRUM board and weekly burn-up chart. We will need to plan out new features fully before implementing them. We are also not testing our functions towards the end of our sprint which we really need in order to make the code production level ready. We have to make a regular habit of keeping the repo update with the changes we make to our project. We probably should make an effort to make some comments to code so when others use it they are not completely lost on the functionality of it. We can clearly communicate any difficulty when individually working on a task to receive help when needed.

Actions to Keep Doing

We should continue to communicate with one another, which we have been doing really well. We should continue to coordinate extra meeting times as everyone seems to be able to work with the proposed times. Therefore, we should continue these group meeting times which increases our productivity as we can code together and discuss further plans. We should continue linking each other helpful resources, in order for us to learn the necessary skills cohesively. We also need to continue to pair program whenever it is needed so that we can finish tasks/ user stories more efficiently when

previous user stories have been completed. We will also continue to meet, plan, and code together with difficult functionalities, which includes the recommendation system. We also merged some branches separately, which saved time merging everything at meetings.

Work completed/not completed

Completed:

- Website responsiveness is improved so users can enjoy website with other devices.
- Users have the ability to cancel an upload profile image process and have the spinner update accordingly, allowing them to choose a new file to upload.
- Images now uploaded will be resized if it is too big so they can still upload the image to the website.
- Users can now click the delete and mark as read button located in the received section now responds after one click

Not Complete:

- Implement improvements to existing recommendation system for artists, so that the list can be more accurately display the right artists.

Work completion rate

The total number of user stories completed during the prior sprint was 5. As a team, we spent 65 ideal hours working on our tasks. In total, we spent our time working on our tasks across 6 days. We completed 1 user story a day and worked on average 10.83 hours a day. Our cumulative progress has been 323 hours over the course of 38 days, which comes out to 8.5 hours per day.
