Working Prototype Known Problems Report

Project Name: Share Yourself Artist Web Team
Team Name: SYA Web
Date: 3/20/19

List of functions not working correctly:

Resizing image before going to database

The image has to be resized before it hits the server. Right now images are resized if they exceed a max width or height. Currently it is also being resized after it hits the server, but that is a problem because we are charged as soon as the image takes up any storage space.

Web page responsiveness when loading components

The website, in general, loads pages in a slow manner. This is due to the amount of information needed to be updated and loaded in each component. This problem is that certain components and features need to be loaded, which slows down the entire component/page altogether.

UI Responsiveness does not work on every device / page size

Spent several days practicing ui component system by Vuetify to adjust existing grid system, but a lot more difficult than anticipated.

After thorough testing, the rest of our functions that we implemented SEEMED to run perfectly as intended.

List of user stories to test for Acceptance Criteria

- Get alerted when art piece is submitted and user is redirected.
- Chat
  - Date/Time/Chronologically showing

- Deleting art pieces from the dashboard
- Profile picture across the website
- Refund if business does not respond.
- Sidebar shows recent submissions and routing to correct place.
- Submissions are now categorized for business (replied,unreplied)
- Mark as read moves messages to read for artists.
- Three tabs on the user artist dashboard.
    - Recently responded / recommended
- Filter art by category
- Forgot password sends an email
- Cloud Functions / CRON jobs: weekly free credits, update recommended artists lists, refund artists.
